NRHA lifetime member
and FEI member

Strongid® C 2X

STRONG OPINIONS ON PERFORMANCE

“I need my horses mentally and physically ready to perform every time in the ring. We travel a lot to train and compete. Knowing my horses are on STRONGID® C 2X makes all the difference. STRONGID C 2X gives me confidence knowing they are in top condition when they enter that arena. New horses arrive at our training facility throughout the year, and owners appreciate that their horse is on a daily deworming program. STRONGID C 2X is safe for the whole barn and effective, taking the worry out of my parasite-control program and allowing me to concentrate on doing my job.”

— **Matt Palmer**,
National Reining Horse Association
lifetime member and Fédération
Equestre Internationale member

STRONG OPINIONS ON PERFORMANCE

“STRONGID C 2X has been an integral part of my feeding and parasite-control program for 11 years. We ask a lot of our horses being on the road traveling, and in Southern California, our boarding facilities have shared turnout and a high stocking density. My veterinarian and I made the decision to feed all the horses in my barn STRONGID C 2X. In fact, it is the only product I require my customers’ horses to be on daily, so we can be at our best.”

— **Archie Cox**,
hunter/jumper rider,
trainer, clinician and judge

A DAILY DOSE GIVES YOU POWER OVER PARASITES

Keeping parasite levels under control helps your horse perform at his best. Parasites steal nutrition, energy and good health from your horse. Left unchecked, parasites can cause damage to vital organs, impair growth and performance, and may cause colic. A daily dose of STRONGID® C or C 2X helps break the cycle of parasite infection with the power of prevention* and control. The STRONGID C or C 2X result: Your horse is ready to perform.

WHY DEWORM DAILY?

Certain risk factors may call for daily deworming to help maintain health and peak performance:

- Boarding and training barns
- Movement on/off farm for training or competitions
- High-risk age groups such as foals, weanlings and geriatric horses
- High stocking densities (over two horses per acre)
- Non-rotated pastures
- Continuous parasite exposure
- Horses with insulin resistance or Cushing's Disease
- Confirmed fecal egg count of 200 to 500 eggs per gram

If your horse meets one or more of these risk factors for parasite infection, talk with your veterinarian about an Individualized Deworming (ID) program involving STRONGID C or C 2X.

HOW DO STRONGID C AND C 2X STACK UP?

SAFE

- Active ingredient (pyrantel tartrate) is potent, yet safe.
- For use in mares at any stage of pregnancy and in stallions.
- Foals may be administered STRONGID C or C 2X as soon as consistent intake of grain mix is occurring. This is generally between 2 to 3 months of age.

EFFECTIVE

- Kills *Strongylus vulgaris* larvae before they can damage vital organs or grow into adulthood and produce eggs that contaminate pastures.
- Effectively controls adult large strongyles, and the adult and larval stages of small strongyles, pinworms and ascarids.
- STRONGID C (pyrantel tartrate) provided a high level of control adult and fourth-stage ascarids (roundworms) with efficacies of up to 100%, confirmed by two separate field studies.¹

EASY

- Alfalfa and molasses-based pellets help ensure eager consumption and can be top dressed or mixed into any feedstuff.
- Original STRONGID C requires 4 ounces daily per 1,000-pound horse.
- Concentrated STRONGID C 2X requires 2 ounces daily per 1,000-pound horse.

DOSES PER PACKAGE

STRONGID C 2X 50 lb. bag = 400 doses** 10 lb. pail = 80 doses**	STRONGID C 25 lb. bucket = 100 doses**

GETTING STARTED IS EASY

First, work with your veterinarian to determine your horse's ID program needs.

Next, administer a broad-spectrum purge dewormer such as QUEST® PLUS (moxidectin/praziquantel) Gel to treat your horse for existing parasites such as encysted small strongyles and tapeworms, and then begin daily treatment with STRONGID C or C 2X.

Finally, work with your veterinarian to determine the ideal duration for daily treatment and frequency of

purge deworming necessary based upon your horse's parasite risk factors and unique ID program.

For more information, talk with your veterinarian, and visit www.strongidc2x.com and www.questhorse.com.

Important Safety Information: Do not use QUEST Gel or QUEST PLUS Gel in foals less than 6 months of age or in sick, debilitated and underweight horses. These products should not be used in other animal species, as severe adverse reactions, including fatalities in dogs, may result.

^{*}Strongylus vulgaris
