

THE BEST FLIES ARE THE ONES THAT NEVER HATCH.

Solitude[®] IGR
(2.12% cyromazine)

The summer season brings warm weather, sunshine and plenty of peaceful hours in the sun for your horses. But the summer also brings flies. And flies are more than just a nuisance — they're a serious health risk, known to vector:

- Pigeon fever
- *Salmonella*
- Vesicular stomatitis
- Influenza
- Strangles
- *E. coli*
- Habronema (summer sores)
- *Onchocerca*

Stop flies before they get big enough to bother your horses. SOLITUDE[®] IGR (*cyromazine*) is a safe and effective way to help prevent the development of house and stable flies.

In and around horse barns, training facilities and paddocks, SOLITUDE IGR eliminates up to 100% of house and stable flies.

This allows you to:

- Minimize threats from infectious disease vectors
- Greatly reduce the use of neurotoxic pesticide sprays and overhead fly systems
- Create a healthier, less stressful environment for your horses, your staff and your riders

Plus, it's cost-effective and easy to use — just ½ oz. in your horse's daily feed, regardless of breed or size. Start feeding in the spring before flies appear, and you'll start seeing results in just two weeks — and full benefit within four to six weeks.
